

20 Side-Project Ideas for .NET Developers

01

Personal Finance Tracker

Organize income and expenses into clear categories and view spending trends at a glance.

Backend:

ASP .NET 8 Web API hosted on Azure App Service

Frontend:

React dashboards with Chart.js

Architecture:

Modular Monolith

Database:

Neon Postgres

Deployment:

Azure App Service

02

Habit Streak Tracker

Log daily habits and watch your streak grow with friendly reminders.

Backend:

Log daily habits and watch your streak grow with friendly reminders.

Frontend:

.NET MAUI mobile app

Architecture:

Serverless

Database:

Amazon DynamoDB

Deployment:

AWS Serverless Application Model

03

Workout Logger

Record exercises, sets, and weights, then chart progress over time.

Backend:

ASP .NET 9 Web API (hosted via .NET Aspire)

Frontend:

.NET MAUI cross-platform app using LiveCharts

Architecture:

Modular Monolith

Database:

SQLite

Deployment:

Modular Monolith

04

To Do List

Create tasks, set priority levels, and filter what still needs doing.

Backend:

Blazor Server (.NET 8) on Azure App Service

Frontend:

Built-in Blazor components with SignalR

Architecture:

Monolith

Database:

Azure Neon Postgres

Deployment:

Azure App Service

05

Weather Dashboard

Check current conditions and forecasts with instant alerts.

Backend:

Azure Functions with OpenWeatherMap integration

Frontend:

React + Tailwind CSS + Alpine.js on Azure Static Web Apps

Architecture:

Serverless

Database:

Azure Cache for Redis

Deployment:

Azure Static Web Apps + Function App

06

Simple Blogging Platform

Write posts, tag them, and let readers comment.

Backend:

ASP .NET Core 9 + HotChocolate GraphQL

Frontend:

NextJS + TailwindCSS + Apollo GraphQL

Architecture:

Modular Monolith

Database:

MongoDB

Deployment:

Docker Compose

07

Mini Social Network

Build a profile, connect with friends, and share updates in a personal feed.

Backend:

Azure Functions with OpenWeatherMap integration

Frontend:

React + Tailwind CSS + Alpine.js on Azure Static Web Apps

Architecture:

Serverless

Database:

Azure Cache for Redis

Deployment:

Azure Static Web Apps + Function App

08

Photo Gallery

Upload pictures, group them into albums, and choose who can view each one.

Backend:

AWS Lambdas (Web APIs) with ImageSharp,
AWS S3 for storing images

Frontend:

Next.js Static Site

Architecture:

Serverless

Database:

DynamoDB, AWS S3

Deployment:

AWS

09

Online Store

Browse products, add to cart, checkout, and view order history.

Backend:

ASP .NET 8 microservices on AWS Fargate with Stripe integration

Frontend:

React storefront

Architecture:

Microservices

Database:

Amazon Aurora PostgreSQL

Deployment:

AWS ECS Fargate

10

Invoice Maker

Fill out a form to generate and download professional invoices in PDF.

Backend:

.NET 8 Minimal API on Azure Functions using IronPDF

Frontend:

Angular SPA

Architecture:

Serverless

Database:

Azure CosmosDB

Deployment:

Azure Serverless

11

Smart Recipe Suggestor

Enter what's in your fridge and get tailored meal ideas in seconds.

Backend:

Azure Functions HTTP trigger calling OpenAI GPT 4o

Frontend:

React + Material UI

Architecture:

Serverless

Database:

Azure Cosmos DB

Deployment:

Azure Static Web Apps + Function App

12

Link Shortener

Turn long URLs into short ones and track clicks.

Backend:

ASP .NET 9 Web API

Frontend:

Alpine.js minimal form

Architecture:

Modular Monolith

Database:

PostgreSQL

Deployment:

Docker Compose

13

Appointment Scheduler

Book, reschedule, and receive reminders for upcoming healthcare visits.

Backend:

Blazor Server (.NET 8) on Azure App Service with TickerQ & Twilio

Frontend:

Blazor Server UI

Architecture:

Monolith

Database:

Azure SQL Database

Deployment:

Azure App Service

14

Team Project Board

Track tasks, deadlines, and Kanban columns for small team projects.

Backend:

ASP .NET 8 Web API on Docker Compose with SignalR

Frontend:

React + DnD Kit

Architecture:

Modular Monolith

Database:

MySQL

Deployment:

Docker Compose

15

Document Management

Upload, tag, and version documents in a searchable library.

Backend:

ASP .NET 8 microservices on Azure Container Apps with Cognitive Search

Frontend:

React + TailwindCSS

Architecture:

Microservices with Event-Driven notifications

Database:

MongoDB

Deployment:

Azure Container Apps + MongoDB Atlas

16

Calendar Appointments Application

Post events to a shared calendar and let guests RSVP.

Backend:

ASP .NET 8 Razor Pages (deployed via .NET Aspire) with SendGrid

Frontend:

FullCalendar JS in Razor view

Architecture:

Modular Monolith

Database:

SQL Server

Deployment:

.NET Aspire

17

Taxi Service

Request a ride, match with a driver, and track the trip on a live map.

Backend:

ASP .NET 8 microservices on AWS ECS Fargate using gRPC & SignalR; Kafka for event streaming.

Frontend:

React + Mapbox GL JS

Architecture:

Microservices with Event-Driven Architecture

Database:

Amazon Aurora PostgreSQL (PostGIS)

Deployment:

AWS ECS Fargate

18

Job Search WebSite

Browse open positions and apply with a single click.

Backend:

ASP .NET 8 MVC on AWS Elastic Beanstalk

Frontend:

Razor Pages with Tailwind CSS

Architecture:

Modular Monolith

Database:

Cassandra

Deployment:

AWS Elastic Beanstalk

19

Resume Matcher

Upload your resume and see how well it fits a job description.

Backend:

ASP .NET 8 Web API on Azure App Service, using ML.NET for similarity scoring, TikaOnDotNet for text extraction, and Azure Blob Storage for file uploads.

Frontend:

React

Architecture:

Modular Monolith with an event-driven pipeline for resume processing.

Database:

Azure SQL Database

Deployment:

Azure App Service

20

Home Sensor Dashboard

Monitor temperature and humidity in real time with intuitive graphs.

Backend:

.NET 8 Worker Service (MQTTnet) + Minimal API for REST

Frontend:

Grafana dashboard

Architecture:

Microservices

Database:

Docker Compose

Deployment:

Docker Compose
