Data Annotations in

C#

SWIPE

[Required]

```
public class User
{
    [Required(ErrorMessage = "Name is required.")]
    public string Name { get; set; }
}
```

Ensures a property must have a value (not null or empty).

Arguments:

ErrorMessage(optional): custom validation message.

AllowEmptyStrings (default: `false`): set to `true` if you allow empty strings but not nulls.

[Range(minimum, maximum)]

```
public class Product
{
    [Range(1, 1000)]
    public int Quantity { get; set; }
}
```

Restricts numeric or date values to a valid range.

Arguments:

minimum / maximum: numeric or 'DateTime' limits.

ErrorMessage(optional): custom validation message.

[StringLength(maximumLength, MinimumLength = min)]

```
public class Account
{
    [StringLength(20, MinimumLength = 5)]
    public string Username { get; set; }
}
```

Defines how long a string should be.

Arguments:

maximumLength: required upper limit.

MinimumLength: optional lower bound.

ErrorMessage(optional): custom validation message.

[RegularExpression(pattern)]

```
public class Contact
{
    [RegularExpression(@"^\d{10}$")]
    public string PhoneNumber { get; set; }
}
```

Validates data against a regex pattern.

Arguments:

pattern: regex expression to match input.

ErrorMessage(optional): custom validation message.

[AllowedValues(...)]

```
public class Order
{
    [AllowedValues("Pending", "Processing", "Completed")]
    public string Status { get; set; }
}
```

Restricts input to specific allowed values.

Arguments:
A list of valid options.

[DeniedValues(...)]

```
public class Account
{
    [DeniedValues("Admin", "Root")]
    public string Username { get; set; }
}
```

Ensures certain values are never allowed.

***Arguments:
A list of valid options.***

[DataType]

```
public class Event
{
    [DataType(DataType.Date)]
    public DateTime StartDate { get; set; }
}
```

Specifies the semantic meaning of a property, helps front-end frameworks display and validate appropriately.

Common types:
DataType.EmailAddress
DataType.Password
DataType.Url
DataType.Currency
DataType.DateTime
